

Benjamin Zhu

benjaminzhu25123@outlook.com | Shenzhen, China | U.S. Citizen

Data and business analytics student who builds validated datasets, automated workflows, predictive models, dashboards, and decision-ready recommendations using Python, SQL, Excel, Power BI, and Tableau.

EDUCATION

The Chinese University of Hong Kong, Shenzhen — Shenzhen, China

Expected May 2028

Bachelor of Business Administration (BBA), AI Marketing | Relevant Coursework: Business Analytics, Marketing Analytics, Statistical Modeling, Data Analysis & Visualization, Python, SQL, R

TECHNICAL SKILLS

Programming & Data: Python, SQL (MySQL), R, Pandas, Excel, Google Sheets

Analytics & BI: Power BI, Tableau, Matplotlib, data cleaning, feature engineering, machine learning, A/B testing, causal analysis, temporal validation

Workflow & Communication: CLI automation, data validation, documentation, dashboard development, presentation-ready reporting

SELECTED PROJECTS

NBA Matchup Predictor — Personal Data Pipeline & Machine Learning Project

2026

Python, Pandas, XGBoost, CatBoost, Scikit-learn, CLI automation

- Built and validated a 66,738-game historical dataset by joining game and team-statistics sources, standardizing fields, and applying duplicate, null, range, and matchup-quality checks.
- Engineered rolling performance, rest-day, back-to-back, and home/away features; implemented season-based temporal validation to prevent future information leakage.
- Automated data preparation, model training, resumable experiment sweeps, reporting, and matchup prediction; latest checkpoint achieved 64.6% accuracy and 0.684 ROC-AUC.

Bank Direct Marketing Analysis — Quantitative Marketing Course Project

Spring 2026

Individual focus: Double Machine Learning subgroup analysis

- Cleaned, organized, and documented 41,000+ customer records from the UCI Bank Marketing dataset for reproducible analysis and reporting.
- Estimated how prior contact affected term-deposit subscriptions across customer segments using Double Machine Learning and translated heterogeneous effects into targeting recommendations.

Traveloka Customer Experience Analysis — Marketing Analytics Group Project

Spring 2026

Individual focus: Random Forest modeling and SHAP

- Integrated Skytrax airline, airport, seat, and lounge review datasets; built and validated Random Forest models to analyze customer satisfaction and recommendation behavior.
- Applied SHAP to explain key drivers and converted model findings into clear service and positioning recommendations for Traveloka.

2024 Cathay Hackathon — Finalist, Best Idea | Hong Kong S.A.R.

Sep–Nov 2024

- Researched passenger needs and marketing information, structured findings, and collaborated with teammates to present a data-informed inflight-entertainment strategy to industry stakeholders.

EXPERIENCE

China Star — Assistant Manager | Lacombe, LA, USA

Jan 2018 – May 2024

- Organized order, inventory, and supplier information to support accurate daily decisions and reliable restaurant operations.
- Reviewed order intake, preparation, packaging, and pickup workflows to identify bottlenecks and improve service coordination during high-volume periods.
- Managed inventory counts and supply orders, documented standardized procedures, communicated shifting priorities, and trained staff.
